Education

August 2018 – August 2025 — **Ph.D in Mathematics**,
Cornell University, Ithaca, NY
Advisor: Yuri Berest
Thesis title: Derived commuting schemes, representation homology, and cohomology of Lie algebras

August 2014 – June 2018 — **BS in Mathematics and Applied Mathematics**,
Sun Yat-sen University, Guangzhou, China.

Interests

- My research interests are derived algebraic geometry, algebraic geometry, representation theory and homotopy theory, as well as fields related to derived algebraic geometry such as homological algebra and algebraic topology.

- Most of my current projects are related to representation homology, which is a DAG object modeling derived representation scheme. I primarily focus on the computational aspects of these objects and on the connections between their higher information, the underlying algebro-geometric spaces, and classical results in other fields.
